

GES

GREASE
ERADICATION
SYSTEMS

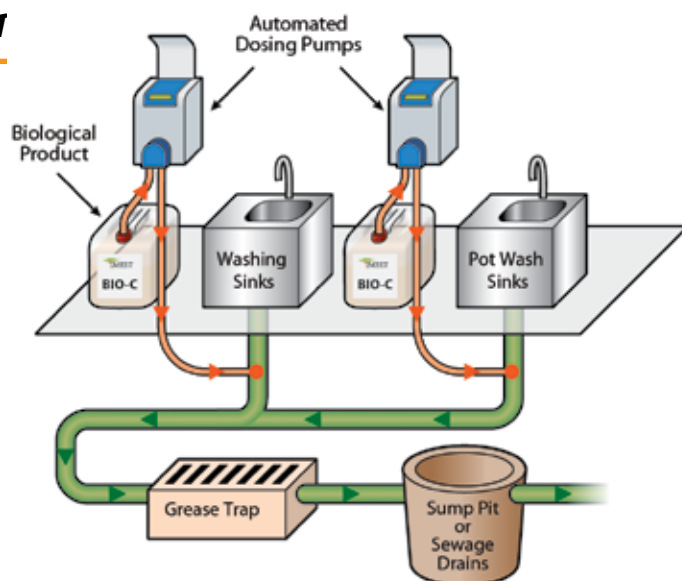

Untreated drains, grease traps and sump pits result in operational problems such as blockages, slow draining sinks, overflowing grease traps and foul-smelling drainage systems.

These problems often result in unplanned and recurring expenses to hire outside cleaning companies to jet, rod or pump-out drains and clean pits.

With the installation of dosing dispensers, MEET will inject environmentally friendly biological based degreasers that will break-down fats, oils, greases, proteins, carbohydrates / starches and other organic matter on a daily basis. This process will reduce drain-line and grease trap malodours and blockages.

Simple, Safe, Environmental & Cost Effective System

- Prevent drain blockages
- Reduce flooding incidents
- Reduce the frequency of cleaning intervals required in grease traps
- Reduce smells from drain pipes, gullies, floor grates, grease traps

Dosing Pump

The MODD series is an automatic dosing system that provides the timed delivery of a liquid product. It is controlled by a real-time clock and offers up to eight programmable timing entries. Programming is achieved using an external keypad with security access codes and is viewed on an alphanumeric display.

- Power : 230V AC, 50-60Hz, 60mA (max), 15W (max)
- Flowrate : 5mm silicone, 210ml/min max (using water)
- Control circuitry: programmable LCD display
- Approvals: EMC 89/336/EEC, EN61000-6-3:2001, EN61000-6-2:2001, LVD 72/23/EEC, EN60335-1
- Dimensions (mm): H175 x W115 x D165
- Weight (approx.): 1.5kg

Brand Quality Assurance

As part of MEET Quality Assurance, biological degreaser (Bio-C) supplied to our Clients is regularly tested by an independent laboratory for a high Colony Forming Units (CFU) count which will ensure our product's strength. MEET guarantees a bacterial CFU count of no less than 1,000,000 per milliliter.

BIO-C is sold in more than 56 countries around the world and is on average 10 times more concentrated than competing brands.

Why is your CFU count important?

CFU count will ensure the biological product concentration you receive from your provider has a guaranteed strength and has not been over diluted.

It is always important to ask your supplier for an independent lab test confirming the minimum strength and dilution of their product.
